

Jeffrey Begg

Physical Therapist, Fellow of the Canadian Academy of Manipulative Physiotherapy

In Canada, physical therapists refrain from identifying a 'specialty'. Instead, they may state a preferred area of practice. This would include the types of conditions they are most familiar with and spend most of their time treating. Jeffrey's preferred area of practice includes the following:

- Motor vehicle accident injuries of all types.
- Dizziness and vertigo.
- Acute and chronic spinal pain and disorders.
- Stubborn joint conditions unrelieved by other therapies.

Patients often seek a therapist with whom they share a particular interest, especially if that interest is related to their injury. Jeffrey is and has been involved in the following pursuits:

- Varsity-level track and field (high jump)
- Inline skating
- Mountain and road biking
- Volleyball
- Golf
- Musical performance
